

# E. M. HUNT

E M Hunt was formed in 1979 as an Engineering Company, fabricating and engineering for local major companies. Very quickly local builders and farmers were asking for jobbing work to be carried out. E M Hunt soon built a reputation for manufacturing quality animal handling equipment, not just as standard items for sheep, cattle and pigs, but manufacturing precisely to suit every customer's individual need and requirement.

During this early period of growth E M Hunt still continued to develop 'Industrial Manufacturing' and have many high profile contracts to our name.

## HUNT STABLING

It is with this high standard and reputation in mind that we have now developed a Hunt Stabling range of products.

We understand that every customer has individual requirements and standard stables are not always required. Therefore, we offer a service which allows each project to be priced on an individual basis.

We manufacture our products using only top quality materials. Our stables are supplied galvanised as standard but to enhance the aesthetic appearance of a project stables can be supplied galvanised and then electrostatically powder coated to any colour requirement.

# E. M. HUNT

Our stables are supplied for self-build purposes but can be erected by our own team of builders.

Hunt Stabling products can be manufactured to allow useage of suitable existing buildings, transforming them into the ideal housing for equine use or manufactured to suit new building projects. Our free design service provides each customer with a layout which is tailored to meet their individual requirements.

We can also supply swivel door feed buckets, self-fill water bowls and hay racks.
